# PROJECT ORGANIZATION AND PARTICIPANTS

- NHTSA-funded frontal impact tests on PMHS with a focus on highly reclined occupants
  - Current safety standards are based on occupants seated in standard posture (~24° recline)
  - Improvements to seats and restraint systems may be needed to ensure good protection for people in alternative postures
- Primary outcome: cohesive dataset that can be used for future validation of ATDs and human body models

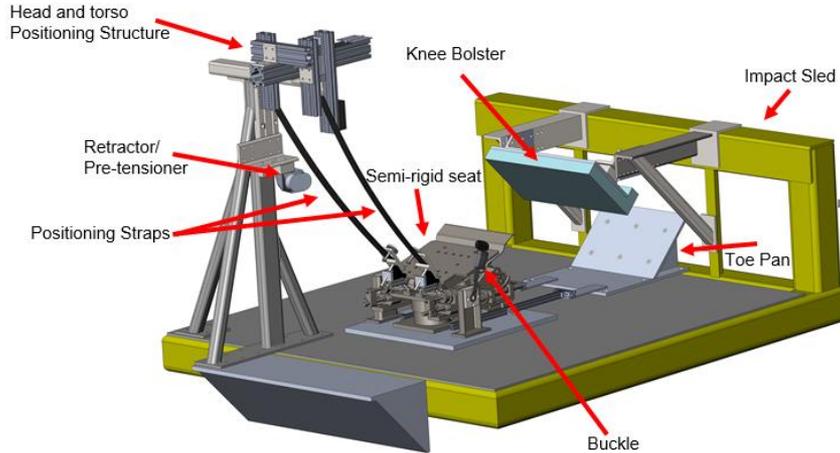

# SUBJECT INSTRUMENTATION

- Whole body kinematics
- Spine, head, pelvis, lower extremity accelerations and angular rotations
- Chest deflection
- Subject surface scans

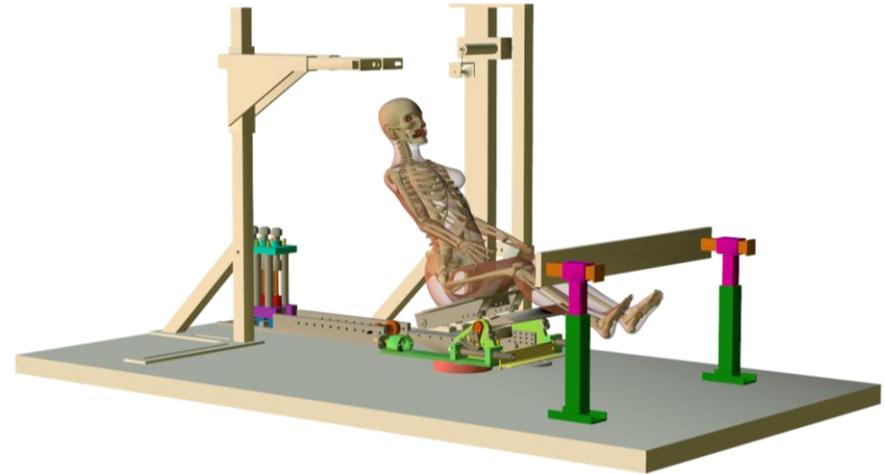

# TEST RIGS

## UMTRI

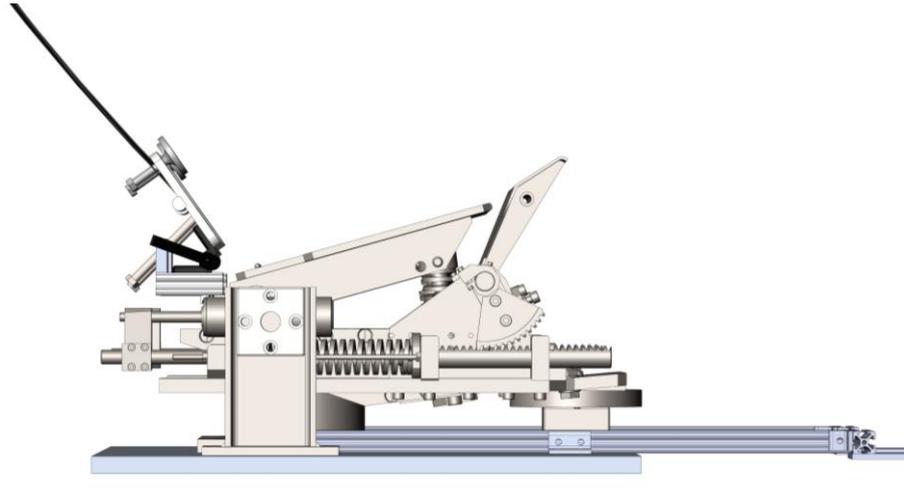

## MCW

- Open seat back allowing for recline up to 90 degrees
- Simulated integrated restraints

# SEATING ENVIRONMENT

- Controlled-response seat with seat pan and anti-submarining ramp (from Uriot et al., 2015)
- Mimics response of production seats but is well characterized, and easily reproduced and modeled

# TEST MATRIX

Number of Tests	Delta V (kph)	Seat Back Angle (deg)	Restraint Configuration	Knee Bolster
3	32	25	Baseline	Out of contact
3	56	25	Baseline	Out of contact
3	32	45	Baseline	Out of contact
3	56	45	Baseline	Out of contact
3	TBD	TBD	TBD	TBD
3	TBD	TBD	TBD	TBD
3	TBD	TBD	TBD	TBD
3	TBD	TBD	TBD	TBD

- MCW also conducting low speed (15 kph) tests on each PMHS prior to 32/56 kph tests
- Remainder of test matrix determined after completion of first 12 tests
